

url: https://thinking-tester-contact-list.herokuapp.com/

- First step open Vugen then create new script and solution.
- Then start record.
- Here I am selecting Vuser_Init, Action, then Vuser_end.
- After recording the code will generate automatically.

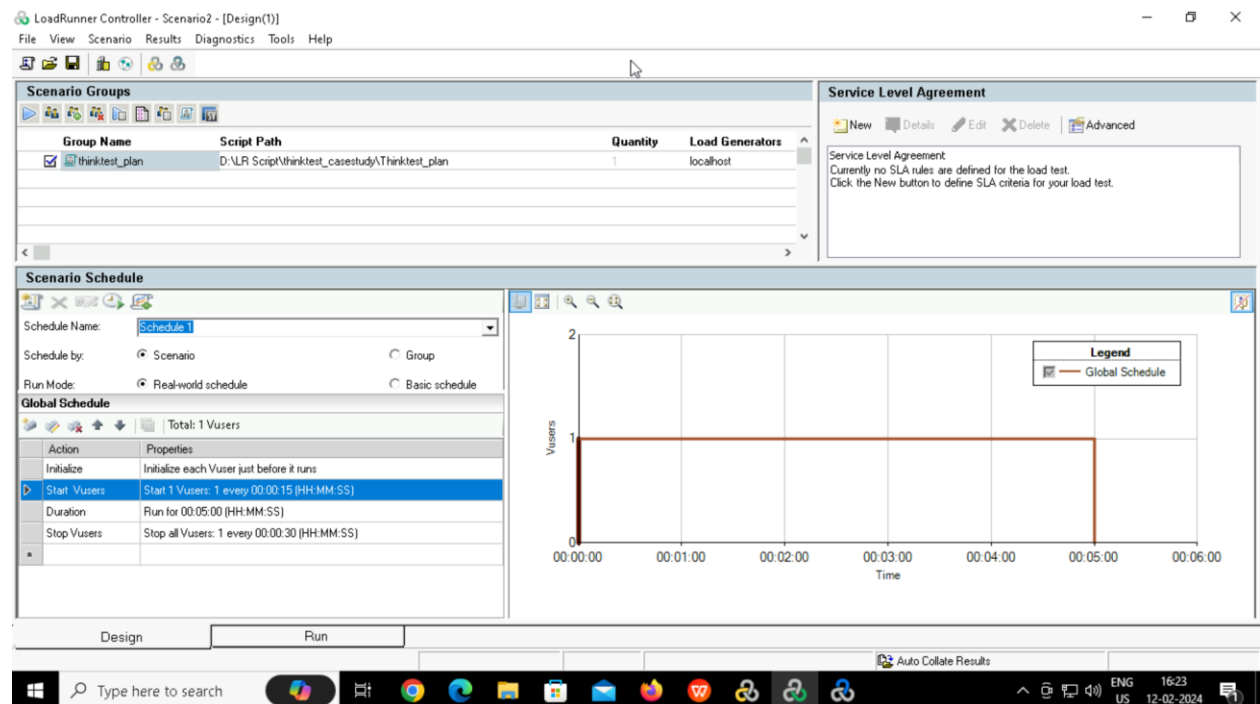

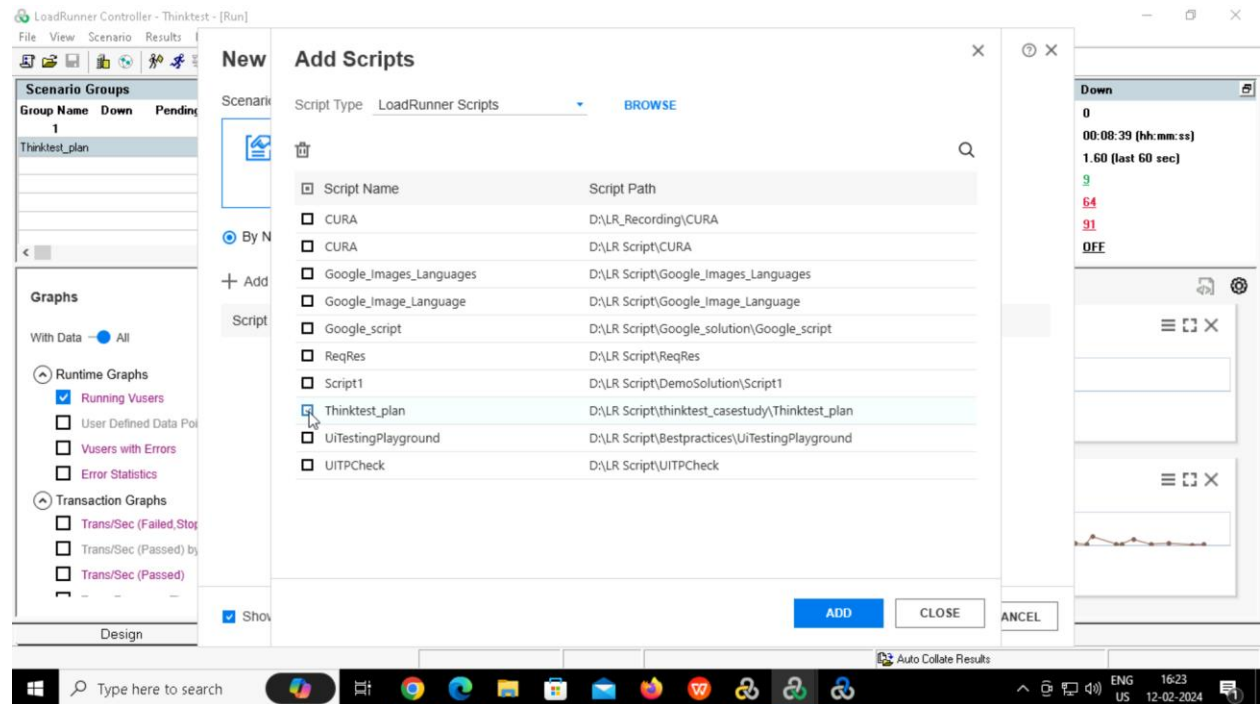

3. Open Controller

- The controller part done the testing.

- It will test the script that I added in controller.
- In this controller we can add virtual user and setup the time and choose different set of groups.

LoadRunner Controller - Scenario1 - [Design(1)]

File View Scenario Results Diagnostics Tools Help

Scenario Groups

Group Name	Script Path
thinktest_plan	D:\LR Script\thinktest_plan

Scenario Schedule

Schedule Name: Schedule 1

Schedule by: Scenario

Run Mode: Real-world schedule

Global Schedule

Action	Properties
Initialize	Initialize each Vuser just before it runs
Start Vusers	Start 1 Vusers: 1 every 00:00:15 (HH:MM:SS)
Duration	Run for 00:02:00 (HH:MM:SS)
Stop Vusers	Stop all Vusers: 1 every 00:00:30 (HH:MM:SS)

Group Information

Group Name: Thinktest_plan

Load Generator Name: localhost

Script Name: Thinktest_plan

Path: D:\LR Script\thinktest_plan

Type: Multi Protocol

Virtual Location: Network Virtualization not installed

Virtual Location Description:

4. Analyze the result

- After finishing controller part and analyze that controller result using Analyzer tool.
- In that analyze tool will generate the Html reports.
- In Analyze tool we can add comments also.
